250-265	Yes	Data Protection Administrator for UNIX using NetBackup 6.5	No	N/A	N/A
250-365	Yes	Data Protection Administrator for Windows using NetBackup 6.5	No	N/A	N/A
250-311	Yes	Symantec Endpoint Protection 11.0 Administrator	No	N/A	N/A
250-300	Yes	Backup Exec 10.0 Administrator	No	N/A	N/A
250-521	Yes	Data Protection Designer for Windows (NBU 5.0)	No	N/A	N/A
250-421	Yes	Data Protection Designer for UNIX (NBU 5.0)	No	N/A	N/A
250-722	Yes	Data Protection Implementation for Windows (NBU 5.0)	No	N/A	N/A
250-622	Yes	Data Protection Implementation for UNIX (NBU 5.0)	No	N/A	N/A
250-323	Yes	Data Protection Administrator for Windows (NBU 5.0)	No	N/A	N/A
250-223	Yes	Data Protection	No	N/A	N/A

Symantec. Certification Program

		Administrator for UNIX (NBU 5.0)			
250-422	Yes	High Availability Designer for Windows (VCS 4.1)	No	N/A	N/A
250-522	Yes	High Availability Designer for UNIX (VCS 4.0)	No	N/A	N/A
250-700	Yes	High Availability Implementation for Windows (VCS 4.1)	No	N/A	N/A
250-222	Yes	High Availability Implementation for UNIX (VCS 4.0)	No	N/A	N/A
250-240	Yes	Storage Foundation 4.0 Administrator	No	N/A	N/A

Recommendations on Next Steps:

The Symantec Certification Program encourages candidates to always take the newest versions of our exams. For example, if you wish to become certified based on your area of expertise, you will need to pass certification exams using NBU 6.5 and/or VCS 5.0.

If you have passed some of the required exams for the legacy Veritas Certified Professional certifications, (Data Protection for Unix or Windows using NBU 5.0 and/or High Availability for Unix or Windows using VCS 4.0 or 4.1), you can continue on that path; however, Symantec is currently no longer promoting the Symantec Certified Professional (SCP) program/level. You will receive multiple Symantec Certified Specialist certificates and the SCP certificate. It is important to know that Symantec will phase out the SCP and replace it with a new program/level that builds on the previous level/Symantec Certified Specialist requirement.
