

Symantec™ Hosted Mail Security

Hosted email security solution protects against spam, email-borne viruses, and other unwanted content without requiring hardware or software installation

Overview

Symantec™ Hosted Mail Security protects email infrastructures from spam, viruses, and other unwanted content without requiring onsite hardware, software, or ongoing maintenance. Hosted by Symantec, the solution features award-winning Brightmail™ AntiSpam and Symantec AntiVirus™ technologies. In addition to a 97%+* antispam effectiveness rate, Symantec Brightmail™ AntiSpam boasts an accuracy rate of 99.9999% against false positives.** Administrators can customize mail policies

by user or group. Quarantine management is simplified with both administrator and end-user quarantines accessible via the console and automated email digest reports sent to users' in-boxes. The spam quarantine email report provides options to allow end users to manage their quarantined email freeing IT managers from having to address individual quarantine issues.

Secure browser-based access allows administrators to set and enforce email security policies, while content compliance features make it easy for organizations to

control sensitive email content and enforce content rules to conform to IT, HR, or regulatory requirements.

Key benefits

- Powered by industry-leading Symantec Brightmail AntiSpam and Symantec AntiVirus technologies for effective spam and virus protection
- Offers comprehensive email protection without requiring on-premise hardware, software, or ongoing administration and maintenance
- Stops spam, viruses, and other unwanted content from entering the network, or burdening the messaging environment
- High accuracy allows customers to safely delete spam without review, so they won't need to double-check quarantines for false positives
- Provides secure browser-based access for setting and enforcing email security policies
- Allows administrators to customize mail policies by user or group
- Administrator and end-user quarantine that includes both Web-based and automated email digest options allows end users to manage their quarantined email and frees IT managers from having to address individual quarantine issues
- Localized end-user facing content in French, German, Italian, Spanish, and Japanese languages
- Preserves email infrastructure by allowing only filtered email – free of spam and viruses – to reach corporate email servers
- Content filtering features include attachment blocking,

subject and message body filtering and encrypted file handling

- Content compliance features make it easy for organizations to control sensitive email content and enforce content rules to conform to IT, HR or regulatory requirements
- Graphical reporting to analyze valuable traffic, spam, antivirus, and filtering statistics and events

System requirements

Management of the service is via a secure Web connection using one of the following browsers:

- Microsoft Internet Explorer 6.0
