

Symantec™ On-Demand Protection Solution

Prevent the compromise of enterprise assets caused by unprotected network access from unmanaged devices

Overview

The Symantec On-Demand Protection Solution helps to prevent the compromise of enterprise assets such as company financials, customer information, and intellectual property caused by unprotected network access through Web-enabled applications (e.g. Webmail), Wireless LANs, and SSL VPNs via unmanaged devices including home computers, kiosks, and guest laptops. Symantec On-Demand Protection eliminates the exposure resulting from unmanaged devices by delivering an On-Demand Agent that adapts its policies to the environment and provides integrated endpoint security technologies that help ensure compliance with security policies, prevent unauthorized data transfer, and protect confidential information.

Key benefits

- Enables the secure deployment of web-based enterprise applications
- Helps protect customer, employee, and corporated data that is accessed by unmanaged devices
- Helps prevent network downtime caused by the propagation of malicious code in the corporate network by unmanaged devices
- Helps protect confidential data by creating a secure environment that provides encryption and file deletion upon session termination
- Provides protection from viruses and worms by enforcing antivirus and personal firewalls via Host Integrity policy checks
- Lowers total cost of ownership by delivering endpoint

protection on-demand via existing web infrastructure

Features and technical specifications

Available Modules

- Virtual Desktop - Data protection via virtualization and encryption of the file system combined with restricted system access.
 - Host Integrity - Predefined checks for antiviruses, personal firewalls and service packs; custom checks for process, registry key, file, and operating system.
 - Malicious Code Prevention - Detection and prevention of keyloggers, screen scrapers and account creation via behavioral and signature-based engine.
 - Cache Cleaner - Data sanitization via deletion of browser history, downloaded data, temporary files, and cookies.
 - Connection Control - Outbound connection blocking from endpoint based on domain/URL, IP, or port.
 - Adaptive Policies - Location switching based on endpoint parameters such as IP range, registry key, DNS, and others.
-

Example Scenarios

- Salesperson using Webmail at a hotel business center
- Contractor accessing intellectual property through SSL VPN
- Guest accessing the Internet through the corporate wired or wireless LAN

System requirements

Symantec™ On-Demand Protection Solution

Symantec™ On-Demand Agent

- Virtual Desktop, Connection Control, and Malicious Code Prevention
 - Operating System: Windows® NT 4 (SP6), Windows 2000, Windows XP, Windows Server 2003
- Host Integrity
 - Operating System: Windows 98, Windows ME, Windows NT 4 (SP6), Windows 2000, Windows XP, Windows Server 2003
- Cache Cleaner
 - Operating System: Windows 98, Windows ME, Windows NT 4 (SP6), Windows 2000, Windows XP, Windows Server 2003, Mac OS® X, Red Hat® Linux 7.3 or later
 - Browser: Microsoft® Internet Explorer 5.0 or later, Netscape® 6.0 or later, Opera 7 or later, Firefox® 1.0 or later, Safari 1.0 or later, Mozilla 1.2 or later

Symantec™ On-Demand Manager

- Operating System: Windows 2000, Windows XP, Windows Server 2003
