

# Symantec™ Web Security for Microsoft® Internet Security and Acceleration (ISA) Server 2004

Provides high-performance, reliable virus and spyware protection and URL filtering for Web traffic

## Overview

Symantec™ Web Security for Microsoft® Internet Security and Acceleration (ISA) Server 2004 provides high-performance, reliable virus and spyware protection and URL filtering for Web traffic served through the ISA Server. Administrators can use the familiar Microsoft Management Console for easy configuration. The solution leverages Symantec's patented URL filtering technology to promote worker productivity, help reduce exposure to legal liability, and preserve valuable bandwidth. Organizations benefit from automated updating of virus and spyware definitions and the URL database through LiveUpdate™, and uninterrupted virus scanning, even when loading new definitions.

## Key benefits

- Provides comprehensive protection against viruses and spyware
- Includes URL filtering to promote worker productivity, helps reduce exposure to legal liability, and preserve bandwidth
- Features Symantec's categorized database of millions of URLs and patented Dynamic Document Review™
- Offers optimized scanning of HTTP traffic via seamless integration with the Microsoft ISA Server
- Enables fast and easy implementation without requiring any end-user or client changes

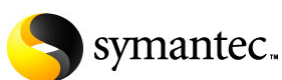

- Reduces costs and saves time by eliminating the need for purchase and configuration of any additional hardware or software
- Provides automatic updates to virus and spyware definitions and URL filtering databases

## System requirements
