

VERITAS Backup Exec™ 10 for Windows Servers

THE GOLD STANDARD IN WINDOWS DATA PROTECTION

VERITAS Backup Exec™ 10 for Windows Servers is the Gold Standard in Windows data protection providing comprehensive, cost-effective, and certified backup and recovery- including the fastest disk-based recovery. An intuitive, web-based user interface simplifies installation and management of backup and remote servers with easy-to-use wizards. Centralized administration provides scalable management of distributed backup and remote servers. Wizards simplify data protection and recovery procedures for any level user and any size network. With a complete family of high performance agents and options to protect Windows, Linux and UNIX server data, as well as desktops and laptops, Backup Exec offers simple, flexible and granular data protection.

WHAT'S NEW AT-A-GLANCE

| Core Features | Benefits |
|---|--|
| Environment Check Utility | Simplifies installation by detecting potential issues that may cause a problem during the install- Runs before Backup Exec is installed and checks if the media server has the proper system environment and checks 3 rd party application versions |
| Multi-Staged Disk Backups | Improves manageability by defining retention periods for disk-based backups before moving them onto tape, supporting disk-to-disk-to-tape strategies |
| Backup Exec SmartLink Technology | Simplifies and centralizes management by integrating with Replication Exec and Storage Exec |
| Policies | Provide a method for managing backup jobs and strategies, allows the administrator to determine what to protect, and when, in advance of running the backup job. |
| EFI system partition backup and restore | The Extensible Firmware Interface (EFI) is required to boot Windows on all Intel Itanium 64-bit computers. You can back up and restore EFI system partition data on remote Intel Itanium 64-bit computers. |
| Availability windows for selection lists | You can now set a time range for when resources in a selection list will be available for backup. You can set a default availability window for all selection lists, or set the availability window for each individual selection list you create. |
| Set thresholds for recovering stalled jobs | If the Backup Exec services become unresponsive, you can set the threshold at which Backup Exec changes the status of active jobs to stalled and at which Backup Exec fails the jobs that were stalled and recovers them. |
| Cluster Protection Support | Provides backup and recovery protection for servers in cluster server environment. A separate Backup Exec core product, agent or option license is required for all ACTIVE servers or nodes only, whether they are physical or virtual. |
| Virtual Server Protection Support | Provides backup and recovery protection for the Microsoft Virtual Server and VMware environment where one machine with multiple processors is configured into multiple virtual machines. |
| Agent/Option Features | Benefits |
| Centralized Admin Server Option | Simplifies and centralizes management and monitoring of multiple Backup Exec servers across a distributed network or in remote offices |
| Advanced Disk-based Backup Option | Enables faster backup and fastest disk-based recovery through synthetic and off-host backups |
| Remote Agent for Linux/UNIX Servers | Provides high performance network-wide data protection for 32 and 64-bit remote Linux and UNIX servers |
| Microsoft SharePoint Portal Server 2003 Support | Safeguards a SharePoint Portal Server 2001 and 2003 corporate knowledgebase system with online, fast and reliable data protection and granular recovery – including server farms |
| Desktop and Laptop Protection | Support for Outlook 2003 and Simplified deployment |
| Extended Application Platform Support | Integrates fast and reliable data protection support for application platforms such as Microsoft Operations Manager, Microsoft Virtual Server, VMware, Lotus Domino, and Oracle 10g. |
